Datheon — Task 2: Superstore Executive Sales & Profit Dashboard

Executive Dashboard Report | Intern: Mehak Jilani | Internship: Data Analytics & Power BI (Cohort 2026) | Period: 2015–2018 | Source: superstore_clean.csv (9,994 rows, 5,009 orders, 793 customers)

How to use: Open **PowerBI_Dashboard_index.html** for the live interactive version. This PDF is the exported executive report required by Datheon. DAX measures are in **Task2_DAX_Measures.txt**. Star Schema: Fact_Orders → Dim_Customer, Dim_Product, Dim_Date.

Total Sales	Total Profit	Profit Margin	Total Orders
$2,297,201	**$286,397**	**12.47%**	**5,009**
Avg Order Value: $458.61	Total Quantity: 37,873	Customers: 793	Peak Year: 2018 ($733,215)

Page 1 — Executive Overview

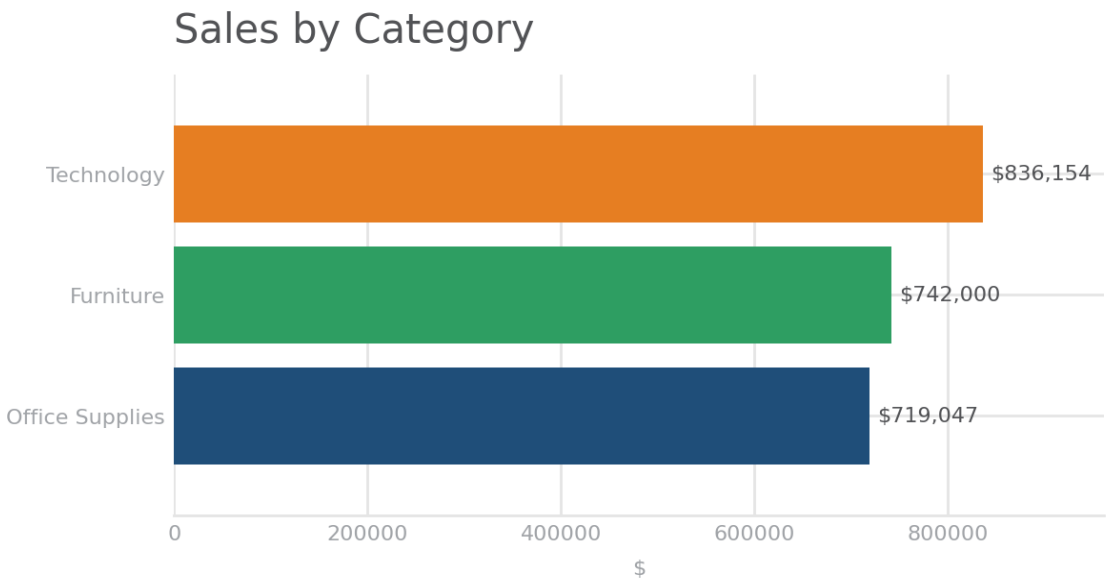

Reading: Sales grew from $484,247 (2015) to $733,215 (2018). 2016 dipped -2.8%, then 2017 grew +29.5% and 2018 grew +20.4%. Profit followed the same path every year, so growth was profitable, not discount-driven.

Year-on-Year Table

Year	Sales	Profit	Margin	YoY Sales
2015	$484,247	$49,544	10.23%	—
2016	$470,533	$61,619	13.10%	-2.8%
2017	$609,206	$81,795	13.43%	+29.5%
2018	$733,215	$93,439	12.74%	+20.4%

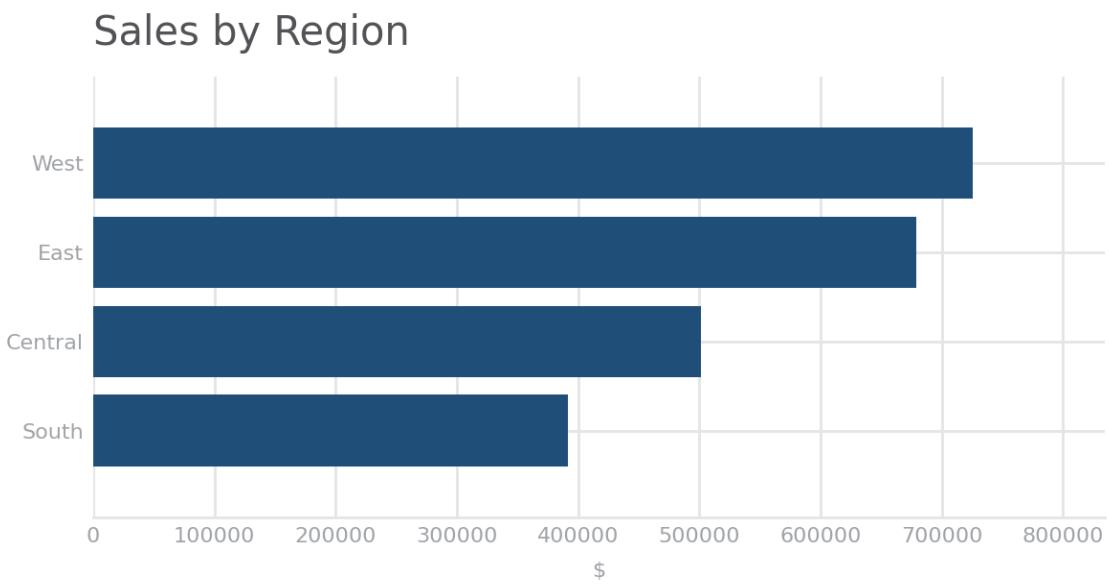

Page 2 — Product Profitability

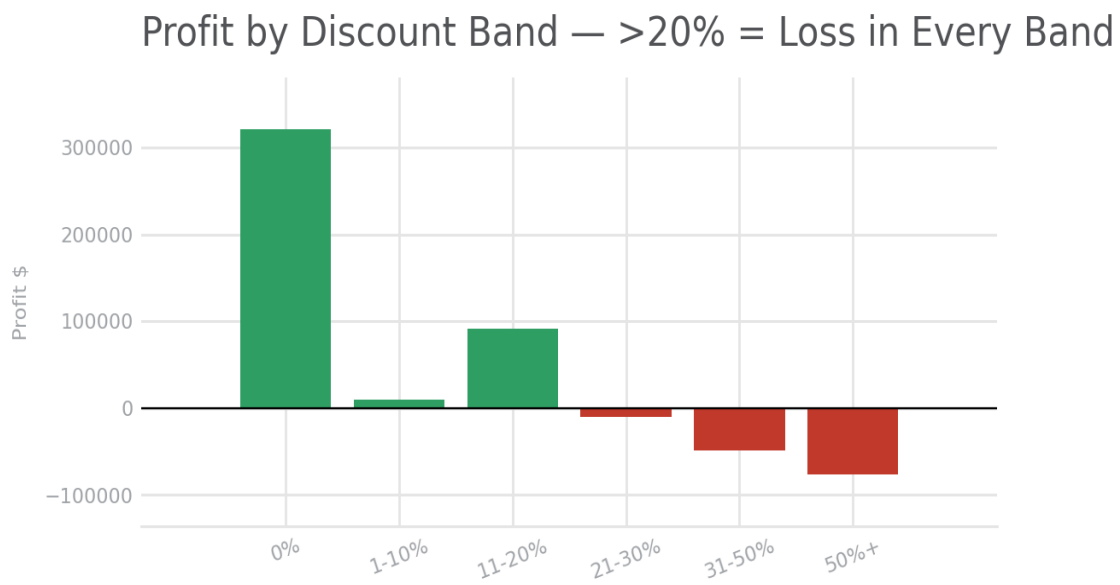

Finding 1 — Technology is the profit engine: $836,154 sales → $145,455 profit (17.40% margin). **Finding 2 — Furniture is a revenue trap:** $741,999 sales → only $18,451 profit (2.49% margin). Office Supplies sits in the middle: $719,047 sales → $122,491 profit (17.04%). Technology + Office Supplies = 93.6% of total profit.

Sub-Category: Top profit = Copiers $55,618, Phones $44,516, Accessories $41,937, Paper $34,054, Binders $30,222. Only 3 sub-categories in loss: Tables -$17,725, Bookcases -$3,473, Supplies -$1,189.

Page 3 — Regional & Discount Performance

Region: West $725,458 sales / $108,418 profit (14.95%) is best. East $678,781 / $91,523 (13.48%). South $391,722 / $46,749 (11.93%). Central $501,240 / $39,706 (7.92%) is lowest margin — needs pricing / cost review. West + East = 61% of sales.

Finding 3 — Discount >20% is loss-making in every band: 0% discount = $320,988 profit. 11–20% = $91,756 profit. But 21–30% = -$10,369, 31–50% = -$48,448, 50%+ = -$76,559. Total loss from >20% discount = **-$135,376**. Recommendation: cap discount at 20%, and require approval above 20%.

DAX Measures Used (see Task2_DAX_Measures.txt)

Total Sales = SUM(Fact_Orders[Sales]) | Total Profit = SUM(Fact_Orders[Profit]) | Total Orders = DISTINCTCOUNT(Fact_Orders[Order ID]) | Profit Margin % = DIVIDE([Total Profit], [Total Sales], 0) | Prior Year Sales = CALCULATE([Total Sales], SAMEPERIODLASTYEAR(Dim_Date[Date])) | YoY Sales Growth % = DIVIDE([Total Sales] - [Prior Year Sales], [Prior Year Sales], 0) | Avg Order Value = DIVIDE([Total Sales], [Total Orders], 0)

Executive Recommendations

1. **Cap discount at 20%** — saves up to $135k loss. 2. **Fix Furniture pricing** — re-price Tables & Bookcases or bundle with Technology. 3. **Push Technology + Copiers / Phones** in West & East. 4. **Review Central region** — lowest margin (7.92%), check shipping / discount mix. 5. **Protect 2018 momentum** — 2018 was peak year, repeat its product / region mix.

Files: PowerBI_Dashboard_index.html (live dashboard) | Task2_DAX_Measures.txt (DAX) | superstore_clean.csv (data) | This PDF (exported report). Rebuild .pbix on Windows PC: Power BI Desktop → import superstore_clean.csv → model Star Schema → paste DAX → build 3 pages as above.
